

# bib with particle2

Michiel van Dijk

December 09, 2020

Note:

- lua filters are for adding multiple authors and affiliations. Not all features are used here.
- knit: sets which formats are rendered. All can be replaced by bookdown::pdf\_document2/bookdown::word\_document2
- Use package command for biblatex defines setting for biblatex. useprefix=true ensures ‘van’ is printed in front of the last name, clearlang=false removes language setting if the article is in English, annotation=false removes annotate field which otherwise might add clutter to the reference,. uniquename=false ensures that initials of authors are not printed when two surnames are the same. This happens by mistake if See biblatex manual for all settings.
