1	Note	1
---	------	---

1 Note

For some reasons, standard use of bib file + cls removes the ‘van’ part of names. Use of the biblatex package will overcome this but its implementation seems very tedious. The above works but if a second output (bookdown::word_document2:) is added an error is produced. It seems that

biblatexoptions: [backend=biber, useprefix=true, style=apa, citestyle=authoryear]

only works when it is not indented but at the same time any further statements into Output are not allowed.
